

Ours "2001: A Space Odyssey" is a supremely intriguing space-travel journey with a profound look at mankind's future... It is one of the very few great films of our times... It gives us something to think, talk and argue... It wonders about our importance in the universe and ignites our imagination and curiosity... It inspires us to dig for insights... /> />As a science fiction fantasy, it is one of the most original films ever made... Kubrick's camera dances to the "Blue Danube" with planets floating exuberantly through the light years... It's an experience in the poetry of motion, a rich statement to the power of cinema... /> />But "2001" reveals that it's not really a science fiction film after all... It's, instead, a philosophical enigma, a magnificent meditation on man's place in the grand scheme of things, and a quest to understand ourselves by knowing all else... /> />"2001" is a unique film about man's evolution told in almost subliminal terms... The people in this classic science-fiction epic hardly matter... Kubrick relates a chronology in images of things♦♦the mountains, the desert, the technology, the space capsule, the computer named HAL (who is more interesting than the humans), and the time warp... The final landing scene is the very hallmark of cinematic genius... /> />As a terror story, too, it is a towering achievement (not on the same scream-inducing level as Hitchcock's "Psycho"), but in an innocent and far more haunting way... The film uses invisible but powerful forces to manipulate the plot but perhaps the most overwhelming one is the picture's vision of man... In Kubrick's fantasy, the Golden Age of man was a neglected instant between a man-ape's exaltation at discovering the first weapon and a nuclear-powered spaceship floating in a graceful orbit around the Earth... Man has indeed evolved! /> />As a spectacle "2001" assaults the mind, eye and ear, with stimulating images and suggestions... We are surrounded by a totally believable futuristic environment... The film is filled with brilliant sequences and extraordinary moments: The first interesting minutes in which the story of the apes is told visually, without a single line of dialog; the zero-gravity toilet with its great list of instructions; the stewardess defying gravity by walking the walls calmly upside down; the frightening moment when we realize that HAL is reading
