

Ours "We are at a 40-year low in our crime rate in our state. Florida crime rates are at 40-year lows. Forty-year lows? That's the kind of dramatic statement that makes fact-checkers sit up and say, "Really?" Gov. Rick Scott has made that statement several times when asked about the killing of Trayvon Martin, an unarmed black teenager in Sanford, Fla. His comments seem intended to reassure people that Florida is a safe place to work and live, even while the state investigates the Martin shooting. (See Scott discuss it on MSNBC's Morning Joe.) "We are at a 40-year low in our crime rate in our state," he said in an April 13, 2012, report from Reuters. "From a public safety standpoint we are absolutely heading in the right direction." Martin died after a resident, George Zimmerman, reported him to 911 as acting suspicious. The operator told Zimmerman not to pursue Martin, but Zimmerman shot Martin a short while later. Police didn't arrest Zimmerman, and that angered Martin's family and others. It also got people talking about Florida's "stand your ground" law, which allows people to use deadly force when they believe their lives are at risk. Scott said an official review of the controversial "stand your ground" law will begin after the investigation into the shooting itself is complete. A reader (and Palm Beach Post reporter) on Twitter reported that Scott again said crime rates were at 40-year lows during a forum in West Palm Beach; she asked us to check it out. So we decided to investigate. Our first stop was with the Florida Department of Law Enforcement. Crime statistics on the website only go back 11 years, so we contacted the department directly. It provided us with crime statistics from 2010 back to 1971, for a total of 40 years. The department uses the number of crimes and the population of Florida to calculate crime rates, so different years can be compared. The crime rate shows how many crimes occurred per 100,000 people. In 1971, the crime rate was 5,668. The rate crept up through the 1970s, peaking in the late 1980s at 8,908. The rate then slowly dropped through the 1990s. In 2000, it dropped below the 1971 mark and continued downward. In 2010, the crime rate reached a new low of 4,105. (See the data for yourself.) As we dug deeper, we saw that Scott has been touting the statistic since it was first
